

# Flow of Data to and From VW Database

**Step 6:** At the start of the next scan DCI.exe sends the updated information down to the workstation

**Step 5:** Updates made to the ValueWise database are automatically pushed out to a holding area on the cell manager each evening to update data at the desktop level

**Step 4:** Asset Manager corrects any data errors in QA tables, then runs validation routine to move data into the asset tables in VW.

**Step 3:** Stored procedure moves data from EE to the QA table in VW

**Step 1:** i.collect agents send collection results to email server via SMTP or directly back to the cell manager via HTTP

**Step 2a:** If required, cell manager retrieves results from email server

**Step 2b:** Cell Manager imports data into the EE database
